1. Purpose
This guideline outlines the antenatal care schedule and care strategies for women receiving antenatal care at the Women's. A summary is provided for the clinical and educational content to be covered at each visit.

See the Shared Maternity Care schedules for women accessing Shared-Care.

This guideline is related to many other guidelines/procedures and consumer fact sheets. These are listed at the end of this document.

2. Definitions
Not applicable.

3. Responsibilities
Midwifery and medical staff, including those providing shared-care.
Midwifery and medical students under supervision.

4. Guideline
4.1 Standardised schedules
The Royal Women's Hospital aims to provide antenatal visits with the right clinician, at the right time, according to the woman's needs. Four standardised schedules are documented in Table 1, and include the use of face-to-face and telehealth visits:

- The standard pathway includes only midwife visits. Medical consults will only be arranged as required. This is "default" for all women, unless indicated.
- The modified pathway includes an initial medical visit at ~22 weeks, after the midwifebooking. Subsequent visits are to be determined after the medical review.
- The Rhesus negative pathway includes Anti D at 28 and 36 weeks.
- The Previous Caesarean pathway includes scheduled medical visits, and no IOL midwife.

Links to suggested scripts for Booking, 22, 32, 34 and 36 week visits can be found on the Pregnancy Clinic Resources page here.

The modified pathway for GDM testing during the COVID-19 pandemic can be found on the Pregnancy Clinic Resources page here.

**Guideline**

Antenatal Care Schedule: hospital-led care

<table>
<thead>
<tr>
<th>Gestation</th>
<th>Clinical content for this visit</th>
<th>Education topics for this visit</th>
</tr>
</thead>
</table>
| **28 weeks** | Standard Antenatal Check  
- Commence symphysis-fundal height measurements and plot on growth chart from 24 weeks. (Refer to Abdominal Palpation procedure).  
- **Check Results:**  
  o **Routine:** GDM screening, haemoglobin (Hb), red cell antibodies for all women  
  o If **Rh negative**: give Anti-D  
  o If previous caesarean – mode of birth to be discussed and VBAC decision-making tool used to make a decision.  |  
- Breastfeeding (review MR 1200)  
- Importance of skin-to-skin post birth  
- Baby tests and injections (NNST, vitamin K, hepatitis B)  
- Sleeping positions during pregnancy  
- Fetal movements. |
| **32 weeks** | Standard Antenatal Check - verbal check using telehealth |  
- Breastfeeding (complete MR 1200)  
- Going home with your baby:  
  o Car seat  
  o Postnatal Care in the Home  
  o Safe sleeping / SIDS.  
- Your previous experience of birth (if applicable)  
- Birth plan  
- What to bring into hospital  
- Support people during labour and birth  
- Managing pain  
- How labour progresses (stages of labour)  
- Sleeping positions during pregnancy  
- Fetal movements. |
| **34 weeks** | Standard Antenatal Check - verbal check using telehealth |  
- Sleeping positions during pregnancy  
- Fetal movements. |
## Antenatal Care Schedule: hospital-led care

### Guideline

### Gestation | Clinical content for this visit | Education topics for this visit
--- | --- | ---
36 weeks + GBS | Standard Antenatal Check  
- If Rh negative: give Anti-D  
- GBS screening  
- If indicated check haemoglobin (consider ordering if low Hb)  
Birth Options: Discuss. Consider referrals for: IOL, elective CS  
**Elective c/s:** confirm date. If unknown ring 8345 3335 for operation date. If not booked for caesarean, liaise with medical team.  
Provide: a pathology form for Group and Hold and 150mg ranitidine tablets.  
Instruct woman to:  
- have G&H test no more than 3 days before caesarean date at RWH pathology.  
- to take: ONE tablet at 10PM the night before the Caesarean and ONE tablet at 6AM on the morning of the Caesarean |  
- Managing early labour at home and when to come in/call  
- Positions in labour and birth  
- Monitoring your baby’s health in labour  
- Complications / what to expect  
- Sleeping positions during pregnancy  
- Fetal movements  
- Breast feeding advice – reiterate.

38 weeks |  
- Standard Antenatal Check - verbal check using telehealth  
- Check GBS result  
- **If for elective c/s:**  
  - Check if has caesarean date and has received ranitidine and instructions  
  - Advise to come into WEC if early labour occurs prior to c/s date  
  - If breech: Refer to **Breech guideline** and action if needed |  
- Sleeping positions during pregnancy  
- Fetal movements.

39/40 weeks |  
- Standard Antenatal Check  
- Give request form (red) for CTG / AFI prior to the 41/40 appointment |  
- What happens if I go over my due date?  
- Sleeping positions during pregnancy  
- Provide **fact sheet for stretch and sweep** if appropriate  
- Fetal movements.

41 weeks (booked if indicated) |  
- CTG / AFI prior to appointment  
- Pakville: IOL midwife appointment (including Standard Antenatal Check)  
- Consider **stretch and sweep.** (Fact sheet **English** version.) |  
- Standard information per **IOL midwife** (Parkville)  
- **Induction information** (Sandringham)  
- Consider need to provide the consumer fact sheet.
